Description

I tried to filter a search (Elastic search) at info.tiki.org and at themes.tiki.org. In both cases I input the search term and got results and then selected Object Type ("wiki page") and Federated search ("local search") to only get results from the site I was at, and only wiki pages. But nothing changed — the same results were listed, including forum posts and tracker items at other sites.

Using Firefox, clicking the "Filter" button had no effect at all. In MS Edge, the page refreshed but the same search results were shown as before — no filtering happened.

Is this a know problem, or is there a method for the user to get this to work?

Hi Gary

Yes sorry, this is a known (by me) problem which i thought i'd fixed a few tikis ago, but didn't.

Will try again when i can get some time, which might take a while...
