Description

- Make field rules work with ItemsList field (and possibly others) because these are DIV elements and have a `text()` value rather than a `val()` value.
- Check and implement condition groups (i.e. `if (this and (that or that or that)) etc`
- Stop radio buttons performing action for each button
- Add `tracker_status` as a conditions and actions "field"

Done:

- ~~Add "if user is the current user" condition and "make field not editable" action to tracker field rules~~
- ~~Add action to wipe or set a value on a field (for instance clearing it if you're hiding one)~~
- ~~Make rule conditions work when rule is on the target (currently the condition only tests the field the rule is on)~~
- ~~UserSelector using autocomplete doesn't work (as it's a comma separated single input not an `ins_xxx[]` array)~~

Updated with a request for tracker status to be added as a pseudo-field
