Description

In a Tiki22 I have 2 trackers (orders, payments) with relation fields.

They may be one order with several payments (recurrent, monthly payment).

I have actually 4 payments per orders and that's work ok but on a specific case I have more payment and Tiki throw errors.

× Error Indexing failed while processing "1268" (type trackeritem) with the error "Could not perform index modification: Data too long for column 'tracker_field_productsboughtPaymentId_text' at row 1" × Error Malformed search query: Could not perform index modification: Data too long for column 'tracker_field_productsboughtPaymentId_text' at row 1 × Error The search index could not be updated. The site is misconfigured. Contact an administrator. Could not perform index modification: Data too long for column 'tracker_field_productsboughtPaymentId_text' at row 1

By nature relation shouldn't be limited and able to handle many items.

UPDATE

It is plaguing and changing behaviour of other components.

In the screenshot below you can see many counter (plugin list count template) displaying a 0 instead of the real value even if the list plugin is set with a different tracker. There is a big chance the index become corrupted or not completed so I escalated.

The fields should be protected in a first place (avoiding using longer data than possible to use) and finally this field specific should be set to a relative high amount of data.
