Description

Up through Tiki 19.x my trackers have had assigned galleries to upload images too, and to browse from. Since Tiki 21.x that has stopped working.

In Tracker Field Type "Files", there are options to assign a gallery to upload file and images too, and there is an option to assign a gallery to browse from. This is how I have my tracker built, so when a user of the tracker uploads an image then the image automatically is stored in the assigned gallery. If the user wants to browse for the image on the server, then the assigned gallery is used to browse from.

At this point, those are no longer working, when a user uploads or browses, they have to manually choose the gallery to upload too, or to browse from.

I will create a show instance. Thank you.

The tracker is live in the show instance, however the upload image to assigned gallery is working, but the browse image from assigned gallery is not working.

John Morris 19 Jan 21 01:37 GMT-0000

This may be related, at my live wiki site <https://thepatriotwoodwiki.org/HomePage>

If you click on a left column menu item for example, click Wood, then the drop down menu, click on Gallery. You'll see the trailing url is `/file14#elf_f1_MQ`

Before the upgrade to 21.x the trailing url was `/file14` which is the id of the gallery. And, that menu selection used to direct you to within the gallery for Wood, now, it goes to the overall file structure.

You can do the same to most of the menu items I have, click on the main subject Education, Literature, etc, then the drop down "Gallery" and you be taken to the main file structure, not the exact folder for that subject as it used to happen.

Now perhaps this is related to the tracker items for image uploads, are not browsing the correct directory, because the urls have changed?

John Morris 05 Feb 21 22:54 GMT-0000

I've confirmed that elFinder gallery url's are bad in my own instance of tiki21.2 and this show instance here.

Since the upgrade from 19.x the software is sticking a strange url when directed to a gallery in

elFinder. Please see show instance, you will find that if you turn off elFinder, the gallery ID is as it should be, when you turn on elFinder, the url adds some strange text to the end.
This is directly related to my inability to use a tracker field to browse an assigned gallery.
