Description

As discussed in the devlist:

I can confirm now a nasty regression introduced in Tiki22.x at some point. (between 2 month ago and now)

It broke filters (item link and item list)

It may be related of tracker field "real" life as I saw the BLOB/TEXT error on a field that was added at some point and not all the items have been saved with it (math field).
(console.php recalc doesn't seems to be in Tiki22)

List of the files reverted to have my Tiki back to work (updated, created, deleted):
