Description

since_last_visit_new is an amazing module

Now, it would be nice to be sent a weekly summary (and URLs) of everything that has changed on the site, since my last login.

This is similar to the idea of RSS to newsletter that phplist offers. However, in our case, it would respect the permissions (WYSIWYCA)

Ideally, it would only be sent if you don't login after x days or weeks.

Feature request inspired by Yannick Boily

I used for sure this way to send last information updates in a newsletter somewhere around Tiki10. In HTML newsletter you can integrates module in the body. You have to set the canonical or source URL in the header to be sure relative links open in the Tiki site.

Cron/job and scheduler should do the rest.

The last bit may be to have this newsletter sent based on last login information, something that can be done (I think but not tested) with a pluginList.
