Description

I login to edu.tw.o with my admin account (it's user "xavi", with admin rights on edu.tw.o, but not on tw.o, where this user "xavi" was already registered, as plain "Registered" user). Intertiki is activated as slave.

I login to edu.tw.o as user "xavi" (without realm on the right), and pass. I login. (I couldn't previous days... :-/)

Then I see a notice on top of each page saying:

□□□□□□

Notice: unserialize(): Error at offset 245 of 250 bytes in
/var/lib/gforge/chroot/home/groups/edutiki/htdocs/tiki-setup.php on line 1446

Then, I edit a page (or other actions), and I get after clicking to save button:

□□□□□□

Notice: unserialize(): Error at offset 245 of 250 bytes in
/var/lib/gforge/chroot/home/groups/edutiki/htdocs/tiki-setup.php on line 1446 Warning: Cannot
modify header information - headers already sent by (output started at
/var/lib/gforge/chroot/home/groups/edutiki/htdocs/tiki-setup.php:1446) in
/var/lib/gforge/chroot/home/groups/edutiki/htdocs/tiki-editpage.php on line 764

Followed by "blank". So tiki is stuck there showing nothing else, and no link to go back, etc.

Please, help!, since it doesn't look nice for users trying tiki....

Btw, The category "FEature" ehre in dev.tw.o is missing "Login" + Intertiki" , plus another category for "Mods", containing all the mods released in cvs sf.net.

Solution

The unserialize problem comes from the type of the 'value' field in 'tiki_preferences'. Default is varchar and we need a 'text' type field so it can contain a bigger chunk (larger than 255 chars). The way around is to use site identity to change the type of that field (there is a checkbox there for that goal), or to wait someone implement the field-type change in the intertiki admin panel, or until we decide that tiki_preferences.value field type should be 'text' by default.
