Description

This is a new feature arrived in BRANCH-1-9

1. add feature_print and checks

2. add tiki_p_print and checks

The above problem-description makes no sense... please look at tw#74 for that

Problem rephrased:

The "Source" button is currently dependant on tiki_p_view_history - it should have a perm of its own.

Solution

This is a lot of (easy) work:

- create a new perm
- modify tiki-page_bar.tpl to apply the perm
- modify the history template to differentiate between history and source

Did I forget something?

I've committed a new feature and permission to source button on 1.10 so i'm closing this tracker item.
