Rating

★★★★★ (0) ?

Description

The Tiki date library does not implement the %l (lower case "L") for time.

Workaround

None, other than to use a different time variable such as %I (with AM/PM designator) or %H (twenty four hour time)

I can confirm this bug is present in 3.x and 5.x, I'm able to get most/all other PHP date/time variables

working correctly but "%l" simply will not work. Internet search yields no known issues with PHP function.
