Description

When I try and save user preferences (viewing is OK), I get the first part of the user preferences screen back, and then it stops at the "User login:" display with:

Preferences

Last login:

Fatal error: Allowed memory size of 134217728 bytes exhausted (tried to allocate 6291456 bytes) in `./.../lib/tikidate-php5.php` on line 182

Solution

If I comment out this line 117 in `tiki-user_preferences.php`:

```
// $tikilib->set_user_preference($userwatch, 'display_timezone', $_REQUEST'display_timezone');
```

the problem disappears. Weird. I have PHP 5.2.10 on Ubuntu on this machine. On my Mac with PHP 5.3.1 I haven't been able to reproduce...

Can anyone reproduce? Or people working on timezone lately have any ideas?

Hi Nelson:

We've had a similar issue on trunk recently at <http://c2c.ourproject.org/tiki/>

Ask Jonny about it... - Thanks for the workaround

Jonny Bradley 11 Jun 10 16:17 GMT-0000

yes, i've seen this on c2c and another one in the US. I think it happens if you are in a different timezone from the server.

Good spot on the offending line - will have a look sometime (but also no problem on localhost)

Actually - i was thinking about the same i've seen on admin/general, but also timezone related i believe...

Dominique Meeùs 30 Jun 10 06:28 GMT-0000

I got a similar problem with `tiki-admin.php?page=general` when I tried to change Wiki>Articles as start page for the users in the Browse tab (? French: Navigation). This change was not saved.

The page reappears without any style or theme or menu. (Normal layout comes back when I reload the page.)

Fatal error: Allowed memory size of 41943040 bytes exhausted (tried to allocate 1572864 bytes) in /var/www/vhosts/d-meeus.be/httpdocs/tiki/lib/tikidate-php5.php on line 182.

This is on a shared hosting (haisoft.be) with PHP Version 5.2.9.

From then I get the same error on saving this page even if I change nothing.

I can change users_prefs_display_timezone on and off, but this makes no difference.

The change is saved but with the same effect on layout and the same message on memory.

Commenting out `//$tikilib->set_user_preference($userwatch, 'display_timezone', $_REQUEST'display_timezone');`

(in my tiki-user_preferences.php it is line 116)

makes no difference.
