Description
There are many pages within t.o that have spaces. On the other hand, the WikiSyntax historically uses WikiWords. I also see that tiki supports aliases for pages. This led me to the following suggestion:

- Propose to render WikiWords as "Wiki Words" in the page. This makes it easier to read. Obviously this mean one control more ...
- When parsing a page, and there is no page for a specific WikiWord, look for the page 'Wiki Word' (adding a space before each capital).

Advantage : this would allow people coming from other wikis to make links with WikiWords, even for pages like Wiki Plugins, without the need for clumsy parenthesis everywhere.
