Description

This isn't so much WYSIWYG as the wiki editor but see no such feature checkbox.

Anyway if you click a wiki editor button twice, like bold, I expect it to undo the action, like the WYSIWYG editor. Instead it tries to make the text doubly bold, which is apparently not possible.

Also if you use a button and drop focus from the editor, I expect the preview Ajax to update as usual, but it does not.

This is working as intended. The normal editor does not track the selection's state/format, which is why you never see the bold, italic or similar buttons "active", as you would in WYSIWYG. Clicking simply re-applies, whether or not the format is already applied.
