Description
    Hi,

    After upgrading my web site from tiki 7.0 to 7.2, I've noticed that the non-parsed wiki feature in the
    wiki pages is not working correctly anymore.
    Indeed, from the tests I've done, it seems that in case of multiple use of the non-parsed wiki feature
    on the same line, only the last one is taken into account.

    For exemple, for the following wiki text, only the second --css is taken into account, the first one not
    so the text is striked through.

        • use the --css option (ex: --css test)

    Regards,
    Yannick

    Ticket update:

    Note that the problem occurs mainly in fancytables.
    I've enabled "Allow HTML" for the problematic pages. That also corrected the problem with non-
    parsed wiki syntax. 😵

Solution
    Fixed in trunk (to be version 9.0) with r39347. Fix backported to 8.x with r39350

I tried to reproduce using the line you provided under Tiki 7.2, but I couldn't. For me the text displays as it should, without strike-through.

I attached the complete source of the Wiki page I used to test. Do you get the same result? If you do, please provide the complete source of a problematic page.

Yannick Charton 25 Oct 11 17:31 GMT-0000

Hi Philippe,

I did some tests today, with tiki 7.2, always with some double dash prefixed words: normal text, text in a code (wiki parsing activated), text in a fancytable, text in tabs.
No problem with normal text, but it seems that when used in a plugin the non-parsing feature stop to work properly.

You can see the result at: http://www.tontonitch.com/tiki/tiki-index.php?page=test_np
Also, i'm attaching the source of the page.

Note that if I activate the "Allow HTML" feature, the non-parsing feature will work again. But I guess that this "Allow HTML" feature doesn't have to interact like that with the non-parsing feature.

Yannick Charton 25 Oct 11 17:35 GMT-0000

Also note that I used HTML tags with tiki 7.0, with the "Allow HTML" feature disabled. And the tags were interpreted anyway. So I guess tiki 7.2 (and maybe 7.1) upgrade(s) corrected that behaviour.

Philippe Cloutier 26 Oct 11 03:13 GMT-0000

I confirm. r36009/r36010, which went in 7.2, introduced this. This still affects trunk as of r38493. Thanks for reporting.
