Description

I am referencing forum post:
https://tiki.org/tiki-view_forum_thread.php?comments_parentId=43682&topics_offset=1

I would like the ability for users in child domains to access the TikiWiki site the same way users in the parent site are able to access it. According to the forum post, "Tiki is not currently capable of authenticating against multiple domains (or multiple LDAP servers)" and "The code could be modified to search, say, the global catalog for the user's DN and then authenticate against the corresponding domain, but this would be custom coding"

I would like an option to specify multiple domains, or a custom code I could use to search the global catalog for the user's DN.

Basically I want all of my users in all of my offices to access the Tiki site. Not just the home office users.
