Description

When you have a tracker with a URL field, and the field display is set to "Show as link", and you enter something like "www.example.com" it is fine and converts to a link. But if you enter simply "example.com" it does not convert to a link and is treated like an internal link instead

If you enter something.example.com it also does not convert to a link. It should. Not sure if problem existed in Tiki 12. Please double check when fixing.

Works fine for me (on my local), can you give an example please?

Jonny Bradley 14 Mar 16 18:03 GMT-0000

Sorry, i re-read that and had misunderstood initially - when you said it doesn't get turned into a link you meant it doesn't get turned into an *external link*, this i do see - but i'm not sure it should be fixed, in fact if the URL doesn't start with a protocol then it should always be a relative link, no?

What if you have pages called something.xyz? Or maybe URL fields should always be external?

One to discuss perhaps...
