### Description

I go to page tiki-search\_replace.php

I try to replace

[<https://wiki.inesss.qc.ca/>

with

[

in all wiki pages

I see a section of pages.

I select all of them.

I click on the "Replace" button at the bottom

Nothing was replaced. No error message either.

Replacing <https://wiki.inesss.qc.ca/> with nothing failed in the exact same way

More info :

If I don't actually « select all of them », all works well for small values, like "10".

If I select all of them, Tiki fails silently while the error log shows :

17-Feb-2020 15:44:26 America/New\_York PHP Warning: Unknown: Input variables exceeded 1000.

To increase the limit change max\_input\_vars in php.ini. in Unknown on line 0

### Workaround

21.x 72daf7b94d2 FIX Provide better feedback and better default value due to limitations of feature.

It still fails, but at least users have feedback.

Unless there is error 500 and they get the "Not route found..." thing
