070610SkypeChatlog

previous day

1:03:21 PM mlpvolt says: hello tiki party
1:04:10 PM Xavier de Pedro says: hi mlpvolt....
1:04:19 PM Xavier de Pedro says: I wonder what's going on in Canada...
1:04:38 PM mlpvolt says: i can only vouch for toronto
1:05:02 PM mlpvolt says: we are a semi developed country
1:05:12 PM Xavier de Pedro says: Are you in Toronto?
1:05:18 PM mlpvolt says: yes
1:05:33 PM Xavier de Pedro says: I didn't know... so many Canadian 😊
1:05:42 PM mlpvolt says: i just tuned in
1:05:59 PM Xavier de Pedro says: btw, do you have the link to the 1.6 html documentation?
1:06:19 PM Xavier de Pedro says: I know there is some where, but can't find it.... (to use it instead of pdf to grab content from there...)
1:06:23 PM mlpvolt says: is it linkde from doc.tiki?
1:06:34 PM Xavier de Pedro says: I don't think so...
1:06:39 PM Xavier de Pedro says: or at least I couldn't find it
1:07:03 PM mlpvolt says: i don't have it on my laptop
1:07:10 PM mlpvolt says: or i woulde upload it
1:07:14 PM Xavier de Pedro says: ok, no worries.
1:07:37 PM Xavier de Pedro says: I keep working on http://tiki.org/TikiProfilesNGO
1:08:23 PM mlpvolt says: good idea - i'm trying to start a profile collection
1:08:41 PM mlpvolt says: what would be your wishlist for next tiki release?
1:09:06 PM Xavier de Pedro says: 1.10 😊
1:09:38 PM mlpvolt says: i'm hoping for 2 things
1:09:58 PM mlpvolt says: a) a tiki equivalent of drupal's CCK
1:10:04 PM mlpvolt says: "content construction kit"
1:10:39 PM mlpvolt says: and an ovrehaul of some admin stuff
1:11:22 PM mlpvolt says: like combining categories admin with groups admin
1:11:42 PM mlpvolt says: full on "organic groups" i think it has been called
1:11:54 PM Xavier de Pedro says: well, for me: Bitweaver install process included in Tikiwiki (as far as TikiFest198 is concerned)
1:13:31 PM mlpvolt says: there are many nice bitweaver things that could be brought over
1:14:03 PM mlpvolt says: i wonder now that tiki developer community is less fraught with stress
1:14:17 PM mlpvolt says: a bridge could be rebuilt between tiki and BW
1:14:58 PM Xavier de Pedro says: this bridge/joint venture could be lovely (for end users)
1:15:58 PM mlpvolt says: we should send a diplomat!
1:16:46 PM mlpvolt says: you are xavi, right?
1:16:57 PM Xavier de Pedro says: yes, I am...
1:17:02 PM mlpvolt says: you login with another handle as well
1:17:16 PM mlpvolt says: anyway thanks for your work on docs
1:17:40 PM Xavier de Pedro says: thanks... same to you, Michael
1:17:53 PM Xavier de Pedro says: (xavi = xavidp = Xavier de Pedro)
1:17:54 PM mlpvolt says: i still have to write up that interview to send to you on educational wiki.
1:18:16 PM mlpvolt says: ....in progress . . .
1:18:24 PM Xavier de Pedro says: 😂
1:18:52 PM mlpvolt says: we've got a number or great new themes at themes. now
1:19:30 PM mlpvolt says: i would like to start collaborating on them and trading .tpl files
1:19:57 PM mlpvolt says: between them until we have one new set of .tpl for moreneat 2.0
1:20:20 PM mlpvolt says: do liek the bitweaver boys did
1:21:47 PM Marc Laporte says: polom
1:21:53 PM mlpvolt says: marc!
1:21:53 PM Xavier de Pedro says: hi
1:22:22 PM mlpvolt says: i was just going to ask who's aggregated there in montreal
1:22:45 PM Marc Laporte says: http://de.tiki.org/tikidoc/
1:22:53 PM Marc Laporte says: Nelson & I today
1:23:09 PM Xavier de Pedro says: thanks marc
1:23:22 PM mlpvolt says: i'll update .doc accordingly
1:23:35 PM Xavier de Pedro says: ok
1:26:14 PM Marc Laporte says: please review: http://doc.tiki.org/keywords
1:28:04 PM Marc Laporte says: and make sure all singular & plurals are OK
1:28:20 PM Marc Laporte says: Nelson will review all links in Tiki CVS
1:28:33 PM Marc Laporte says: Mike changed Article to Articles
1:29:58 PM mlpvolt says: i have a mission
1:30:06 PM mlpvolt says: i choose to accept
1:30:08 PM Nelson Ko says: hi mlp, we already have trackers. Can leverage that to do CCK like stuff through new plugin perhaps.
1:30:36 PM mlpvolt says: we already have all the elements of cck i think,
1:30:44 PM mlpvolt says: just need a front end interface
1:30:52 PM Nelson Ko says: which is a wiki plugin
1:30:55 PM mlpvolt says: the same for organic groups.
1:31:07 PM mlpvolt says: although . . .
1:31:19 PM Nelson Ko says: organic groups is a little more complicated
1:31:30 PM mlpvolt says: the one thing we don't have is "new page inherits permissions"
1:31:32 PM Nelson Ko says: because there are multiple options for implementation
1:31:49 PM Marc Laporte added sylvie-g to this chat
1:32:03 PM mlpvolt says: hi sylvie
1:32:26 PM mlpvolt says: i was just going to say how lovely it would be to have the "new page inherits permissions"
1:32:39 PM mlpvolt says: i would put up a bounty for that for sure.
1:32:52 PM Nelson Ko says: new page inherits perms needs to take care of indiv page perms, category perms? It needs to be thought through
1:32:57 PM Xavier de Pedro says: mlpvolt: isn't it working in 1.10 in structures?
1:33:17 PM mlpvolt says: ?? (has no idea)
1:33:23 PM Nelson Ko says: new page within structures now inherits categories.
1:33:38 PM mlpvolt says: thats a pretty good start
1:33:43 PM Xavier de Pedro says: (i haven't tried myself, but i thought i read somebody did it...). Maybe i was wrong
1:33:44 PM mlpvolt says: let me be explicit
1:33:52 PM Nelson Ko says: yes i did it
1:34:00 PM mlpvolt says: new page must have a 1st backlink
1:34:34 PM mlpvolt says: that backlink has a category, and maybe individual permissions applied
1:34:38 PM Nelson Ko says: but right now, it only inherits cats if you create the new page from the add page from within the structure. (and not through the edit page module).
1:35:04 PM Nelson Ko says: mpl, please elaborate
1:35:26 PM Xavier de Pedro says: well, at least this is working within workspaces.... (for sure, but that's a Mod right now, as you all know)
1:35:40 PM mlpvolt says: if organic groups is on, new page should copy the perms and categories from "parent" = 1st backlink
1:37:25 PM mlpvolt says: the end user story is "what starts in my private section (assigned to group) in my private section" - automatically
1:37:54 PM Nelson Ko says: how does the backlink fit into this?
1:37:54 PM mlpvolt says: sorry what starts private stays private
1:38:18 PM mlpvolt says: 1st backlink is how I say page that new page was initially linked from
1:38:54 PM Nelson Ko says: so, if the page has not been linked to?
1:38:56 PM mlpvolt says: the "parent" page, though structures are not being used
1:39:11 PM mlpvolt says: orphan pages would escape inheritance
1:39:25 PM mlpvolt says: which is as it should be 😊
1:40:04 PM mlpvolt says: structures - as you noted - has been dealt with.
1:40:08 PM Nelson Ko says: what if the 1st backlink is other groups' page?
1:40:18 PM Nelson Ko says: or something like that
1:40:33 PM mlpvolt says: if they "created" it they own it
1:40:54 PM mlpvolt says: if permissions are set from the get go, nobody else ever sees it
1:41:15 PM Nelson Ko says: but when you create a page, links are not created automatically....
1:41:36 PM Nelson Ko says: except through the ? link
1:41:47 PM Nelson Ko says: so it only works through the ?
1:41:50 PM mlpvolt says: the one thing that has to be prevented is pages being "captured" (stolen and made private)
1:43:54 PM Nelson Ko says: Is itenough if the "?" be made to "give inheritance" to the page that is being created if the new "inheit perms from page that is created from" feature is on?
1:56:32 PM Nelson Ko says: you still have the problem when two pages (created by people from 2 different groups) both have ? links to a pagename. The first person that uses the ? link "wins" the page name, and the other person may not be able to use it anymore 😞
1:59:27 PM mlpvolt says: im back
2:02:35 PM mlpvolt says: good point. it should go the first backlink, if there is more than one, it should not inherit anything
2:03:53 PM Nelson Ko says: That won't work because users don't know if they are the first backlink or not.
2:05:48 PM Nelson Ko says: they will be totally confused, will they not?
2:06:00 PM mlpvolt says: having new pages accidentally made private to wrong group is not a big problem
2:06:19 PM mlpvolt says: this should be invisible to users
2:06:41 PM mlpvolt says: they should be able to assume that they have a private "space" (category)
2:06:50 PM mlpvolt says: and new pages are automatically added
2:07:39 PM mlpvolt says: "organic groups" means to me that there is a special type of categoryname = groupname
2:08:34 PM mlpvolt says: this is an "organic category"
mlpvolt says: other categories don't need to behave this way, maybe best that they don't
Nelson Ko says: one of the things I've discovered is that users tend to reuse common pagenames
mlpvolt says: 1 sec
Nelson Ko says: they want to reuse them within their private groups
mlpvolt says: hmmm
mlpvolt says: i had written down once that it would be nice to have a namespace to folders, or namespace to categories capability
mlpvolt says: already we use pagename prefixes for "external wiki" feature
mlpvolt says: so everybody wants mygroup:todo
Dave Thacker says: polom
mlpvolt says: hi dave
Dave Thacker says: so what are we doing
mlpvolt says: discussing "organic groups"
mlpvolt says: do you have a scrollback available?
mlpvolt says: marc gave me a mission to audit doc:keywords
Dave Thacker says: scrolling back now....
Dave Thacker says: is everything on text or is there a conference call running?
mlpvolt says: nelson an i were discussing something that was approaching a full blown "wiki farm" - which i'm not sure is needed
mlpvolt says: no cc, just here afaik
Dave Thacker says: ok,
mlpvolt says: i think organic groups is very important though.
Dave Thacker says: My wish for 1.10 is a guided initial setup.
mlpvolt says: follows from tiki's core competency i think which is groupware
mlpvolt says: an interview type which chooses a profile?
mlpvolt says: smart idea
Dave Thacker says: yes, an interview!
mlpvolt says: i think the profile ought to include some default content
mlpvolt says: mostly howtos
Dave Thacker says: wow! yes i like that too!
mlpvolt says: we could promote the development of tutorials in doc and then ship them with the cvs
mlpvolt says: they would be added with the DB install script
mlpvolt says: need to help people overcome the "great white wall"
mlpvolt says: new tiki no content
mlpvolt says: far better to create categories and structures cause they can be easily renamed
mlpvolt says: segue . . . .
mlpvolt says: on friday i responded to my first user "ticket" on doc:wiki problems
mlpvolt says: amazingly enough - if you write it people sometimes do follow instructions.
Dave Thacker says: sorry afk for a few mins.
mlpvolt says: i think i should rename doc:group to "groups"
Marc Laporte says: singular until is hurts
Marc Laporte says: a group
Marc Laporte says: a permission
Marc Laporte says: a user
Marc Laporte says: 😊
Marc Laporte says: an article
Marc Laporte says: a blog

Marc Laporte says: the blog feature

Marc Laporte says: the article system

Marc Laporte says: 😁

Marc Laporte says: i can live with that but there is rebellion on the eb

Nelson Ko says: articles is better

Marc Laporte says: here they come!

Marc Laporte says: 😁

Marc Laporte says: ok, let me face the EB

Marc Laporte says: face my execution!

Marc Laporte says: make your case:

Marc Laporte says: don't give the refer to higher authority!

Marc Laporte says: just change the doc.tiki.org/keyword

Marc Laporte says: all of theme

Dave Thacker says: singular is easier to keep consistent

Marc Laporte says: all of them

Marc Laporte says: Whatever draws consensus

Dave Thacker says: yes, once the decision is made, we need to etch it in sand.

Marc Laporte says: and whatever people would put in search engine

Marc Laporte says: ex: bug tracker

Marc Laporte says: people won't put trackers

Marc Laporte says: question . . .

Marc Laporte says: is it easier to force a rule on pagenames, or a rule about redirects

Dave Thacker says: hmmmm, redirects are a good way to "fix" pagename problems.... What would the redirect rule say?

Marc Laporte says: if you place a redirect from blogs to blog, marc, it effectively blocks people from renaming pages wrong

Marc Laporte says: sylvie wrote a great redirect rule for me

Marc Laporte says: REDIRECT:((pagename)

Marc Laporte says: i mean exactly

Marc Laporte says: REDIRECT:pagename

Marc Laporte says: it works, and it is human readable.

Dave Thacker says: so could we say always redirect to singular?

Dave Thacker says: or always redirect to valid keyword.

Marc Laporte says: redirect to whatever the page is called.

Dave Thacker says: The base page should match the keyword, right? ( or am I getting ahead of the process)

Marc Laporte says: i think so

Marc Laporte says: just edited homepage and it made a heckuv a lot of sense to me that we have both the old (hierarchical) toc and the alphabetized keyword list

Marc Laporte says: nice redundancy there

Dave Thacker says: yes, they both serve a purpose

Marc Laporte sent file "pluralWikiWords.jpg" to members of this chat

Marc Laporte says: marc - how do i obtain that file exactly?

Marc Laporte says: you should have a Skype popup
Marc Laporte says: which you need to accept
mlpvolt says: so i do . . .
Dave Thacker says: I've got the jpg open. Will get called to Sunday dinner in 10 mins or so....
mlpvolt says: dave: sunday dinner? where are you living, somewhere in the middle of the atlantic?
mlpvolt says: tell them youre not hungry yet
Dave Thacker says: that would offend SWMBO greatly.
Dave Thacker says: Are you asking how that feature works? I've never tested it.
mlpvolt says: marc invokes the evil name: wikiwords
mlpvolt says: camelcase must die.
mlpvolt says: marc that feature must be destroyed. :0
mlpvolt says: failed smiley
Dave Thacker says: Do you want to remove the feature? I see no problem with it.
mlpvolt says: i'm venting
mlpvolt says: camelcase should be renamed on sight
mlpvolt says: is my opinion
mlpvolt says: allowing hardspaces is just a distraction.
Dave Thacker says: ok CamelCase is one thing, but we're discussing plurals, right? How does that plural feature work?
Nelson Ko says: a lot of true blue wiki pages like camelcase, so it could be another option for later version 😊
mlpvolt says: oh 😊
Nelson Ko says: I am looking at plural/singular code now. give me some time to see how it wors
Nelson Ko says: I mean true blue wiki people. lol
Marc Laporte says: I think WikiWords should exist to create links but when the texte is shown, it should show without CamelCase (but with hyperlink)
Marc Laporte says: so it still looks good when you print the page
mlpvolt says: I think the plurals rule is
mlpvolt says: if creating version 1 of a wiki page
mlpvolt says: and last letter of pagename is "s" or "es"
mlpvolt says: and pagename minus s or es exists
Dave Thacker says: Ok, I have to go for awhile. If anyone is around when I get back, I'd like a quick lesson in how to build links from forms to help pages. I want the parameters on the login config page clickable in the same way that the features page is.
Dave Thacker says: bbl in 60 mins or so....
mlpvolt says: promt user that singular exists
mlpvolt says: marc, what screenshot software do you use?
mlpvolt says: highlight with dropshadow . . . you dog
Nelson Ko says: the wikiwords plural thing converts something like MyPages to link to MyPage when content is parsed for display
mlpvolt says: ??
mlpvolt says: oh i get it
Nelson Ko says: so it shows as MyPages in the text, but the link is actually to tiki-admin.php?page=MyPage
mlpvolt says: its the mypages (which doesn't exist links to mypage which does
Nelson Ko says: that is not there at present, but is not too difficult to add I think
Marc Laporte says: Mike: FastStone Capture -> screenshot, anotate and email easily
mlpvolt says: ok, i got that
mlpvolt says: but i just discovered v5 which supports dropshadow
Nelson Ko says: It also converts MyStories to link to tiki-index.php?MyStory, MyMistresses to MyMistress, and My Boxes to MyBox
Marc Laporte says: 😃
mlpvolt says: neslon, i still dont get it.
mlpvolt says: when you type .... it does ???
Nelson Ko says: INo.
Nelson Ko says: If you have a MyStories in a wiki page, normally it will link to the MyStories page when you click on it.
Nelson Ko says: But if this feature is on, it will link to the MyStory page instead, although it remains displayed as MyStories in the text
mlpvolt says: so this is an auto-linking feature
Nelson Ko says: yes
Nelson Ko says: no
mlpvolt says: if i add "see my blog" to a page and page=blog exists then blog becomes a link
Nelson Ko says: I mean, WikiWords is an auto linking mechanism
mlpvolt says: adding plurals means that blogs also becomes a link
Marc Laporte says: Dave you need to modify: templates/tiki-admin-include-wiki.tpl
Nelson Ko says: there are 2 ways to "autolink" in Tiki.
mlpvolt says: yes Hotwords i h tink it is called, right?
Nelson Ko says: The 1st is through WikiWords, also known as CamelCase in many wikis
Nelson Ko says: The second is through HotWords
mlpvolt says: ok three ways
Nelson Ko says: What's the third way?
mlpvolt says: nevermind
mlpvolt says: ")
Nelson Ko says: The plural feature that I described only works for WikiWords now
mlpvolt says: click
Nelson Ko says: For HotWords, you specify the URL for the hotword
Nelson Ko says: in admin...Hotwords
mlpvolt says: which works without a url if it is a local page i think
Nelson Ko says: IWhen I tried to save a hotword with a blank URL, it gives me an error message telling me I need to provide one.
mlpvolt says: which - btw is a good ting to do with out keywords list in doc:tiki
mlpvolt says: i bet it depends if you have A REWRITE RULE GOING
mlpvolt says: caps unintended
mlpvolt says: or maybe not.
Nelson Ko says: One thing you might have to think about when choosing page names is that I think (i may be wrong) that it is easier for the machine to convert plural to singular than from singlular to plural in English.
mlpvolt says: i think you are right but there would be false positives
mlpvolt says: i think manually redirecting is the best way to go.
mlpvolt says: all doc admins / developers should just have a habit that
mlpvolt says: a) they quick edit instead of search on doc two
mlpvolt says: b) if the page DNE they create it and put either a soft or hard redirect to the appropriate place in the documentation.

Nelson Ko says: I like manual redirecting as a principle, but I don't like the page pollution that comes with it, e.g. in search results or page lists.

Nelson Ko says: thinking of a technical way to reduce this technically that is not too CPU/DB intensive.

mlpvolt says: hmmm.

mlpvolt says: is there a way to do a robots.txt inline in the page?

mlpvolt says: redirected pages can also be assigned to a category that only admins can see.

Nelson Ko says: and what does that redirection to a category that only admins can see do?

mlpvolt says: hmmm. I guess unless redirect works before permissions check (unlikely) it would not work at all.

Nelson Ko says: linking manual redirecting as a principle, but I don't like the page pollution that comes with it, e.g. in search results or page lists.

Nelson Ko says: thinking of a technical way to reduce this technically that is not too CPU/DB intensive.

mlpvolt says: hmmm.

mlpvolt says: is there a way to do a robots.txt inline in the page?

mlpvolt says: redirected pages can also be assigned to a category that only admins can see.

Nelson Ko says: and what does that redirection to a category that only admins can see do?

mlpvolt says: hmmm. I guess unless redirect works before permissions check (unlikely) it would not work at all.

mlpvolt says: if they don't see the page in search results = great.

mlpvolt says: if they don't arrive at the page which is supposed to be redirecting, but instead get a permissions error.

mlpvolt says: that is not a very helpful redirect 😞.

Dave Thacker says: returns.

Dave Thacker says: yes, marc I prefer singular. The most important question, based on yesterday's seminar is "What does the user prefer" or "What will they type in the search engine. Do we have a search history?"

mlpvolt says: oooh excellent question

Dave Thacker says: (coffee) after dinner coffee in hand.

Marc Laporte says: http://tiki.org/tiki-search_stats.php

Dave Thacker pops it open.

mlpvolt says: dave, i note you haven't joined the EB meeting this month.

mlpvolt says: right now we have 1 vote for hard rule singular.

mlpvolt says: 2 votes for natural speech.

Dave Thacker says: I think I answered three questions and then was drawn into a long chat with Marc and Gary....

mlpvolt says: and one fence sitter (me).

Dave Thacker says: Let me see if I can get into doc's search stats.

mlpvolt says: which is strange because I'm usually such an opinionated jerk 😛.

Dave Thacker says: http://doc.tiki.org/tiki-search_stats.php seems to favor the singular.

Dave Thacker says: If you can't see it let me know and I'll pastebin it.

Marc Laporte says: can be deleted later: http://doc.tiki.org/tiki-index.php?page=SearchStatsOnTwo

mlpvolt says: astrazenca?

mlpvolt says: well we should take the first 200 on that list and paste them into keywords.

Dave Thacker says: agreed.

mlpvolt says: incredible efficiency.

Dave Thacker says: Interesting Trackers shows up highest as a plural.

Dave Thacker says: permissions-1833 permission-1511.

Dave Thacker says: that's pretty close.

mlpvolt says: articles beats article.

Marc Laporte says: hahahahahahaha.

mlpvolt says: by a nose.
Marc Laporte says: empirical evidence!

mlpvolt says: feels good eh

mlpvolt says: how to kill a good argument

Dave Thacker says: by how much?

mlpvolt says: ....doing spreadsheet magic to include all keywords in keywords

Dave Thacker says: admin is a highly ranked search term. which kills my argument for avoiding tech speak

Dave Thacker pedals the bicycle to charge mlpvolts spreadsheet wand

Dave Thacker says: scrols up to remember what Nelson said about conversion

Marc Laporte says: hehe, so can we put a deadline of Tuesday for choosing Singular vs Plural for all words currently on keywords so we can update the 1.9.8 tiki links to docs?

Marc Laporte says: we don't have to perfect, but let's be consistent 😊

Nelson Ko says: I am in favour of having redirects for all of these, since a lot of these searches are pretty close sing/plural.

Marc Laporte says: consistant between our docs/dev and tiki spp

Marc Laporte says: consistant between our docs/dev and tiki app

Nelson Ko says: As for the page pollution - I will think of how to reduce it.

Dave Thacker says: mlpvolt: are you still fence sitting, or are you coming over to the singular dark side 😊

Marc Laporte says: hahahahah

Nelson Ko says: I am such a bad environmentalist 😞 supporting page pollution now. lol

Marc Laporte says: who are the "2 votes for natural speech"?

Nelson Ko says: pollute first, solve pollution later lol

mlpvolt says: chiba and xavi

Marc Laporte says: natural speech: where can I find definition?

Marc Laporte says: it is a bit subjective, no?

mlpvolt says: marc: i think that would be our list of search results

Marc Laporte says: yes, search results is king

Marc Laporte says: natural speech = most common keyword

Marc Laporte says: Alain said: listen to your users

mlpvolt says: i am taking the first 250 for keywords

mlpvolt says: I am a user!

mlpvolt says: ha

mlpvolt says: new issue:

mlpvolt says: image gallery vs image galleries?

mlpvolt says: i would like to discuss user support

Dave Thacker says: I could support trackers over tracker and permissions or permission if that's what search results say.

mlpvolt says: our online "help system" now consists of

mlpvolt says: "triage desk" = shoutbox

mlpvolt says: forums - users helping users

mlpvolt says: wiki docs

mlpvolt says: irc

Marc Laporte says: "natural speech" = singular in 85%+ of the cases

Marc Laporte says: so, we are only debating 10-15% of keywords
4:45:38 PM mlpvolt says: most popular wins. i don't care if it is by two votes
4:45:57 PM mlpvolt says: (marc is searching for "article" as we speak)
4:46:22 PM mlpvolt says: the question is where do we want users to go first?
4:46:59 PM mlpvolt says: ideally i would say their first stop - is keyword search
4:47:08 PM Marc Laporte says: 😊
4:47:45 PM mlpvolt says: if that doesn't help try editing appropriate troubleshooting page
4:47:56 PM Dave Thacker says: I would flip that on it's head. Where do users want to go first? Usually IRC because they feel they will get quick feedback.
4:48:23 PM mlpvolt says: but thats where we don't want them to do because it doesn't support documentation.
4:48:37 PM mlpvolt says: iff
4:49:09 PM mlpvolt says: all troubleshooting pages are pagewatched by most devs and admins
4:49:12 PM mlpvolt says: and
4:49:32 PM mlpvolt says: two and doc two funnel users to troubleshooting pages
4:49:54 PM mlpvolt says: responses will be more quick than forcing users to figure out irc
4:50:03 PM mlpvolt says: (which is not fun)
4:50:51 PM Nelson Ko says: gotta go now, so is the verdict of the vote natural speech according to search results?
4:51:10 PM Dave Thacker says: IMO, the pages approach ends up re-creating a lot of the wheel forums has already built.
4:51:16 PM mlpvolt says: in the event that troubleshooting page can't be edited to provide a relatively quick solution, we elevate it to a support ticked on dev.two
4:51:18 PM Dave Thacker says: Nelson: Yes for me
4:51:29 PM Marc Laporte says: Nelson: yes for me
4:51:42 PM mlpvolt says: so decided
4:52:34 PM Marc Laporte says: Mike : you in charge of renaming all the pages on dev.two and doc.tw.o and make sure they are in sync?
4:52:35 PM mlpvolt says: forums should be moved to doc site, and hopefully we can get hotlinks to work there.
4:52:59 PM mlpvolt says: everytime somebody mentions! an existing page, it links there.
4:53:14 PM Marc Laporte says: Mike: we need to stabilizing page names ASAP
4:54:33 PM Marc Laporte says: everyone: we are leaving to BBQ now. It's a great pleasure to be working with you all, eating our dogfood and improve Tiki app & tiki community
4:54:45 PM mlpvolt says: well since we all know the rule now - that should be that.
4:55:04 PM mlpvolt says: i have to go - marc can you broadcast the decision to the dev listserve
4:55:41 PM Dave Thacker says: I can send out the dev mail now.
4:55:45 PM Marc Laporte says: tks Dave
4:55:48 PM mlpvolt says: ps. am i the only one who has problems with bouncing posts on dev?
4:55:56 PM Marc Laporte says: me too, it bounces
4:56:01 PM Marc Laporte says: all of SF
4:56:08 PM Marc Laporte says: Sourceforge hates me
4:56:54 PM mlpvolt says: a stale blacklist i guess
4:57:13 PM Dave Thacker says: enjoy BBQ guys.
4:57:28 PM mlpvolt says: why not use a different listserve host?
4:57:39 PM mlpvolt says: yea i go bbq too.
4:57:46 PM mlpvolt says: Dave, it is dinnertime now.
4:57:50 PM mlpvolt says: 😊
4:57:53 PM mlpvolt says: see
4:57:55 PM Marc Laporte says: Mike: we could but priority is 198 and doc.tw.o
4:57:59 PM Marc Laporte says: 😊
4:58:29 PM mlpvolt says: i was thinking google group
4:58:35 PM mlpvolt says: ok must run bye
4:58:45 PM Dave Thacker says: bye
4:59:03 PM Marc Laporte thinks we should use Tiki groups
8:44:04 PM Marc Laporte says: If at all possible, mailing-list-to-forum-gateway
