## Database upgrades

When adding an engine dependent patch, the engine independent SQL must be put in the `YYYYMMDD_description_tiki.sql` file. The engine dependent parts must be put in an accompanying php file, specifying a post_YYYYMMDD_description_tiki function.

**Example:** Add a table with a fulltext index

```sql
DROP TABLE IF EXISTS `tiki_test`;
CREATE TABLE `tiki_test` (
  `title` varchar(255) default NULL,
  KEY `title` (`title`) ) ENGINE=MyISAM;
```

and a PHP file specifying the engine dependent part

```php
20110918_tiki_test_tiki.php
```
function post_20110918_tiki_test_tiki( $installer ) {
    if($installer->isMySQLFulltextSearchSupported()) {
        $installer->query( "CREATE FULLTEXT INDEX ft_test ON tiki_test(`title`);" );
    }
}

**ToDo**

**Remove "MySQL Full-Text Search" in config search**

If the config search "Preference Filters" is set to Advanced, "MySQL Full-Text Search" is still displayed in the results. It shouldn't be.

**Migrating existing databases to InnoDB**

Migration steps

1. Make sure InnoDB is integrated in the standard/SVN Tiki release. Otherwise you may be unable to do any upgrades later.
2. Do a full backup of your current database/installation
3. Upgrade to the latest Tiki version (8.0 SVN or later).
4. Disable MySQL fulltext search in Tiki. It's not supported by InnoDB, and you won't be able to disable it from the GUI after the conversion
5. Drop all MyISAM fulltext indexes
6. Alter the database engine for all tables to InnoDB

Steps 5 and 6 are defined in the file db/tiki_convert_myisam_to_innodb.sql.

**To be tested**

- **TRIM** (would be nice that it works here too...)
