How to avoid direct access of a file

We can't be sure that .inc files are not directly accessible. So:

```php
// This script may only be included - so its better to die if called directly.
if (strpos($_SERVER['SCRIPT_NAME'], basename(__FILE__)) !== false) {
    header('location: index.php');
    exit;
}
```

```php
// This script may only be included - so it is better to die if called directly.
$access->check_script($_SERVER['SCRIPT_NAME'], basename(__FILE__));
```

If you call the file include_permission_print.php instead of permission_print.php.inc, it will look good in the directory as well 😊
