Pre-dogfood servers for Tiki 25 release process

Ref: Pre-Dogfood Server

Status as of 2022-08-27: planning phase

Why

We want pre-dogfood servers to help testing and make the release process smoother. Tiki25 is an exceptional release with WYSIWYG and Markdown which is a massive change, yet it should only impact sites activating it. We want to make sure of this.

Details

Index should be rebuilt as part of the process

Servers

On a new server, which periodically pulls data from production sites

Let's also activate GlitchTip. Let's start with a small sampling of error messages, and increase it as we fix the errors.

Stable to trunk

Testing straight upgrades without any move to WYSIWYG and Markdown:

- https://dev.tiki.org/ (24.x) -> https://nextdev.tiki.org/ (trunk)

trunk with markdown activated

This is where we simulate the experience of a community that wants to migrate to Markdown. We'll need a "convert this page to Markdown tool"

- https://dev.tiki.org/ (24.x) -> https://markdowndev.tiki.org/

System Configuration

```
preference.markdown_enabled = "y"
```
About other sites

The following sites won't have pre-dogfood servers unless some requests them:

- https://wikisuite.org/
- https://profiles.tiki.org/
- https://branding.tiki.org/
