Repository Browser

See it in action at http://code.tiki.org

What

Project to developer a recipe to have a Repository Browser within Tiki. This will be useful for the Software_Project profile and great DogFood for Tiki.

The project could be to use existing code ex.: Integrator, integrate some external code or develop some new code. What do you think?

Some stuff that would be cool.

- When you fix a bug, in the commit message, you refer to it with wiki/plugin syntax and this can add a comment to the bug, close the bug, etc.
- Code Review
- Web Commits

Who

- Marc Laporte
- you?
