Search

**Big project for Tiki7 -> Unified Index**

To be considered:

- [http://www.opensearch.org/](http://www.opensearch.org/)
  - [http://versioneye.wordpress.com/2013/11/05/versioneye-now-supports-opensearch/](http://versioneye.wordpress.com/2013/11/05/versioneye-now-supports-opensearch/)

**Zend_Search_Lucene versus MySQL**

- **Advantage**
  - can weight fields. Ex: a title over the content
  - can search on fields (ex: only on title). Probably can easily filter on language
  - English tokenization by default
  - Search globally on all the object types and not type by type.
- **Possible problems??**
  - To have the good scoring, all the objects must be fetched (but less than 30secs for lucene to search over 4500 tiki files + 1500 wiki pages

  - the index optimization must be run with a batch....

**Related:** Character substitutions

**Todo**

- Need a way to detect a crash

**Open**
