Share

This page is to discuss, improve, and likely streamline (merge?) all share ("push"-type) functionality in Tiki. Watch this is a pull mechanism and will likely stay independent.

Related: Token Access

Current Tiki features

- "Promote" was added to Tiki6 (Renamed to share as requested in r28263)
- PluginSharethis has a bug, do not use
- Tell a friend
- alert

Questions

- Is there anything in Zend Framework to help with this?

Most services offer a http-based api either useable with javascript (no need for frameworks) or php, where we can use the http classes
Feature requests

- URL shortener (Implemented in r28263)
- Useful because
  - could be using page alias
    - append in Wiki Handler could perhaps be useful

Existing services

- http://addthis.com/
- http://addtoany.com/
- http://sharethis.com/ - Has a bug, do not use

Why a new "Share" feature

- Every user can authorize the site with oauth for twitter/facebook so they need not to log in to each of the sites to push a message out on these channels.
- Instead of having a man in the middle doing the service for us (and the statistics/tracking), we can do it here
