Shopping Cart Tiki24

The shopping cart feature/s in Tiki have never really worked, so this is a project to fix the broken bits and add what's missing.

Main things to fix

- Add page to adjust cart before checkout
- Make plugin payment to show parents in a wiki page with customisations
- Replace OrderProfile and OrderItemProfile with (many) more prefs
- Make anonymous shopping work (stored in the session)
- etc

Things to Consider

- Product attributes and SKU's i.e:
  - A code and link for the same t-shirt in L, M and S in red, blue and green
  - Real and downloads able version so the same product
  - Ref: SKU handling for ecommerce
- Add an Inventory Tracker (to support multiple warehouses)
- See https://profiles.tiki.org/BobShop for inspiration and ideas
- Some of what we need is the idea of System Trackers: For example: The product list is a Tracker.
