Video annotations

Kaltura, Video, Video annotations, Video Editor, Multimedia, Screencast, Slidecasting and BigBlueButton should be re-organised.

Now that we have a ScreenCast feature, it makes perfect sense to manage annotations. The data could be kept in wiki pages like PluginAnnotation. Since it's video, the interface needs to be improved though.

- Box location (as we have in PluginAnnotation)
- Text (as we have in PluginAnnotation)
- Start time (new)
- End Time (new)

We could also use this to annotate regular videos from Kaltura.
