

Alternate content by media

This is a feature request idea, as part of Bootstrap theme revamp

It would be nice to have a way to output certain content only for certain media. It should be possible to embed plugins within this content.

- Web/HTML (The default)
- [Print](#)
- [PDF](#)
- [Mobile](#)
- [Slideshow](#)

But maybe also by browser

- Firefox vs Chrome vs IE, etc.

Brainstorming

- Offline mode
- mPDF vs higher-end printing solution from [Online Publishing House - Output formats](#)
- EPUB
- etc.

We need a way to apply [media queries](#) in various part of Tiki, namely:

- modules
- text area content

Plugin Ideas

Output plugin

Idea of a plugin

```
{OUTPUT(media=print)}
This is the print version (ex: high-res image)
{ELSEIF media=mobile}
Output for mobile devices (ex: Small image)
{ELSE}
This is the regular output (ex: regular size image)
{OUTPUT}
```

Content plugin

Idea of a plugin

```
{CONTENT(media=print)}
This is the print version (ex: high-res image)
{ELSEIF media=aural}
Output for audio screen readers (ex: Fangs)
{ELSE}
This is the regular content (ex: regular size image)
{CONTENT}
```

Types of conditions

- print
- pdf (pdf uses print so this could be extra condition. So PDF gets all print + this)
- slideshow (to hide button "click here to start slideshow")
- Bootstrap-related sizes (xs, small, etc.)
- Landscape vs portrait?
- Firefox, Chrome, Internet Explorer, etc.

Param for plugins

Perhaps a new plugin param?

Idea of a new plugin param

```
{IMG(media=print)}  
This image would only be shown in print mode  
{IMG}
```

Override default params for plugins

For above to be truly useful, it would be nice to be able to [Override default params for plugins](#).
