

Bare Tiki

"Bare Tiki" is a project to improve Tiki to make it great for use cases that need next to no features.

One of the [3 Rules](#) is "Make it Optional". However, some of the features can't be turned off. As a community, let's review this, and confirm for which ones we should [create a new preference](#), so they can easily be turned off.

Why?

- Security: If a vulnerability is discovered, you can only be affected if the feature is activated.
- More suitable for some use cases: For example, you want to use Tiki as an [Identity provider](#). You don't want content features. You just want user management. As of Tiki20, there are some features which can't be turned off in Tiki.

Who

- Antoine (leading development on this project)
- [lucias d' being](#)   (providing guidance)
- Marc (providing guidance)
- You?

Major Features

That need a preference so we can turn them off:

- There should be a pref for comments that turns off all comments, and this panel: `tiki-admin.php?page=comments` (see how it's done for blogs as an example)
- Modules could be optional
- Profiles could be optional
- i18n
- Maps
- Feeds
- Tiki Connect
- Stats
- Packages
- RTC

Social networks

When the feature is off, it should not render the proprietary `og:` and `twitter:` meta tags in the page source like:

```
<meta content="Baretiki" property="og:site_name">
<meta content="Baretiki" name="twitter:site">
```

Minor Preferences

(Sub-)Preferences of the main features like Wiki related preferences etc.

- CodeMirror syntax highlighter: `var syntaxHighlighter` gets loaded even when not used?
- jQuery TreeTable JS and CSS loaded on every page even when not used (used only on `tiki-objectpermissions.php`?)
- `lib/query_tiki/pluginedit.js` is loaded on every page even when the pref **Allow plugin-specific edits** is disabled

User Information Display

For example: https://dev.tiki.org/tiki-user_information.php?userId=1

Should be optional preference too. See related wish list item: <https://dev.tiki.org/item5982>

System Menu

Menu ID 42

- External Feeds
- External Wikis
- Mail Notifications?
- Scheduler - when the `feature_scheduler` is off it should not display the option in the Settings submenu
- Tiki Importer
- Tiki Logs
- Toolbars could be optional
- Transitions
- phpinfo

To discuss

Wiki

- Rename is not optional - could be `wiki_page_rename` pref

Print Settings

There could be apps where print settings are not needed.

Membership

- `tiki-admingroups.php` has settings like
 - Membership expiry Anniversary
 - Number of Days
 - Pro-Rate Membership

These should be active only if the feature is activated.

Perhaps one pref `feature_membership`?

Decided to keep as a non-option

Major features

- Groups
- Log in /Log out
- Look & Feel
- Menus
- Performance
- Permissions
- Security
- Tiki Cache/Sys Admin
- Users
- User Settings

Minor features

to keep always on (e.g. when major feature is enabled)

- Edit (like wiki page editing; depending on edit permissions of course)
- Plugin Aliases
- Tiki Check (aka Server Fitness link on the General control panel)
- What else?
