

Daily Build

You can also download a pre-release tarball (ZIP file) that is continually built every six hours. See the **.timestamp** file to determine the time & date of the tarball.

If you want easier updates, you can [get the latest code from SVN or Git](#).

If you are looking for the last Stable / Stable LTS "official" (non-development) releases, please visit <https://tiki.org/download>.

To add more versions on this page, contact Oliver Hertel.
