Developer Documentation

Structure

- Get Started
  - DevTips
  - 3 Rules
  - Hello World

- Overview

- Code Maps and Howtos
  - Ajax
  - Activities
  - Activity Streams
  - Code Howto: Add a preference to an admin panel
  - Code Howto: Add translatable text elements to the User Interface
  - Code Howto Create a Wiki Plugin
  - Creating or maintaining translations
  - Code Howto: Splitting a Smarty template into smaller chunks
  - Code Howto: Dialogs
  - Database Access
    - Database MySQL
    - Database Redact
    - Database Layer
    - Database independence
  - Database Schema Upgrade
  - Events
  - Icons
  - Modules
    - Modules Revamp
  - Permission
    - Permission Check
    - Permission inheritance
    - Code Howto: Create a new permission
    - Permission Revamp
  - Services
    - Dependency Injection
    - Create a service
    - Ex-ante functions
    - Ex-post functions
  - TikiObject
    - Object Attributes and Relations

- HowToDev
  - How to avoid direct access of a file
  - How to manage string localization in JS files
  - How to test JavaScript
  - Naming Convention
  - Composer
  - Accessibility
  - How to comment your code

- Releasing
  - How to release Preparation
  - How to release: Branching
  - How to release
• How to Use the Release Server
• How to release: Follow up
