

Natural Language Generation

As of 2021-12, we are not using [NLG](#) in Tiki. This page is to explore use cases and code/wisdom to leverage.

Code

<https://github.com/DrDub/php-nlgen>

<https://github.com/medio/Inflector>

<https://github.com/liderman/php-text-generator>

Use cases

- [Mail Merge](#)
- An example where NLG will soon be wanted: PluginList output control block
- [NLG for translations](#)
- Turn <https://github.com/baisong/query-diary> into a multi-lingual tag. User writes Lojban system renders it in the Web browser natural language (if there are available suitable generator / dictionaries).
