

Print

This should all be revisited with [Bootstrap](#) and moved to themes:[print](#). See also [Typography](#).

Here we focus on using a global print method for any Tiki object/page, instead of having tiki-print.php, tiki-print_article.php, tiki-print_blog_post.php

It is similar to **tell a friend** why is replacing individual files like send_blog_post.php

This doesn't cover improving multi-print or structure print.

- This is a real pity, since we are not helping ourselves to produce an updated .odt or .pdf handbook out of the current doc.tw.o/[Documentation](#). (Xavi 😞)
 - Marc's reply: 1- Single page print is much simpler, yet still not good enough. Walk first, run later. 2- This is not the same problem we are addressing 3- Someone is sponsoring single page print improvement. I look forward to a sponsor for multipage
 - Xavi's follow up: Ok, I understand, Marc, thanks for the info. I'm also looking for a sponsor for the broken doc.tw.o multi print feature, even if no enhancements are done; I hope I'll find somebody that can make it at least work as before: [bug2840](#))

But it does include taking a look at tiki-slideshow.php and tiki-slideshow2.php for low-hanging fruit.

To do

- Make a [print.css](#)

Questions

- Should this also cover the [Fullscreen](#) feature?

Wishlist

- Use javascript:window.print() to avoid current double step (click print icon, and then CTRL-P)
- A wiki syntax to force a page break
- [Alternate content by media](#)
- print css perhaps should have a more descriptive name?
 - ex.: thenews-print.css
- Print mode should open up all hidden sections (ideally, you can close some of them back to save paper)
- Print mode should allow user to select which version (from all plugin versions) should be shown.
- [Need a print permission](#) one tiki_p_print for all features seems OK. So we could have feature check and permission check to show link to CSS?
- Find a way for alternate content to be sent to the print.css
 - {noprint} wiki syntax so people can have content that is just for the screen
 - Could Tiki detect print mode and put URLs as footnotes?

- [Inline attachments show "No such attachment on this page" on print view.](#)
- [tiki-print_pages.php](#) should allow to choose tikiversion for all pages, if PluginVersion is used
- Along with print.css, have a handheld.css
- [When printing, links should show the actual URL](#)
 - Links and URLs should be displayed in the Print version. For example:
 - **((foo))** should display as **foo (http://sitename/foo)**
 - **((foo|bar))** should display as **bar(http://sitename/foo)**
 - **[foo|bar]** should display as **bar (http://foo)**

Multiprint of structures or page

Wishes from devel list:

- Ability to specify language (for multilingual structures)
- Ability to specify VERSION (when VERSION plugin is used within the structure)
- The problem of too many pages taking too long probably there needs to be a way to create multiple pdf files per chapter or something like that
