

# Regressions in 10x

This page is to report regressions and bugs found in branches/10.x

## To who find/report a bug:

- 1/ Test on your website, test on demo, test on different version (and log results).
- 2/ Give short BUT COMPLETE explanation about the problem. (keep the essential remove the rest) - (give way to reproduce).
- 3/ Retest regularly and for each test, confirm your input. Change date and improve explanation.
- 4/ Log any changes and mark as solved IF RESOLVED (pleasssseeeee).

## To who is able/volunteer to fix:

- 1/ (Please) check from time to time the x.x page regression and bugs report.
- 2/ Choose in specific bugs within your skill and available time range (estimate).
- 3/ Be in touch with the person that reported so he can help/update/retest/mark as solved.
- 4/ If you need to ask another dev something do it (involving back to bug reporter is usually not working - make things worst).
- 5/ Be sure you comment the log report with step taken and bug fix completion (svn release, backporting, etc)

# Regressions with risk of data loss or corruption

These must be resolved any Alpha release or dogfood upgrade

Date or revision number	Reported by	Description	Regression from version number	Status
12 Dec12 - sorry still there in 44262	geoff	trackerlist plugin is just shown raw in wysiwyg editor instead of an editable plugin (ie the clickable grey box) along with a spurious image which is the result of corrupted data in the Source screen - see email to dev list 9Nov	10	Please try r44206 - this was fixed once, broke again, now fixed again i hope (and curse r41705 once more!) (jb) sorry still not fixed (gb) cannot reproduce anywhere except that one server - need more info to reproduce pls (jb)

# Regressions with security issues

11 Mar 2013	Bsfez	Permission are wrongly applied on search result when category differs from global. If global perms for "Can view trackers (tiki_p_view_trackers)" are not check but category same perm is check a user will see tracker's items will not be able to perform a search including those items (results say "No pages matched the search criteria"). If global perm is check and categor is uncheck, the user won't be able to view the items but able to see "forbidden data" in a search result.	T10 and Trunk

# General regressions

Date or revision number	Reported by	Description	Regression from version number	Status
23 Nov 12	Bsfez	I have a random error with "trackerfield_starts. I have NEVER used this type field on this Tiki but still the error showup from time to time. Tody i catch the error on a wiki page i use for template that doesn't contain anything tracker (not module or plugin) but fields references.  	Tiki 9 and Tiki10	
25 Nov 12	Bsfez	I have duplicate comment field and button on Next. I have hard time to reproduce but it seams that having both "New Comment" and "Reply" button active while already writing a comment lead to this duplication. <a href="https://next.tiki.org/blogpost440-User-Login-Did-You-Know#comments">https://next.tiki.org/blogpost440-User-Login-Did-You-Know#comments</a>  	Tiki 9 and Tiki10	
28 Nov 12	Bsfez	While entering data in the present table on Dev i was previsously able to add carriage return (shift-return) inside a cell (look previous input). It is not working anymore.	Tiki10	
30 Nov 2012	marclaporte	<a href="http://doc.tiki.org/Check">http://doc.tiki.org/Check</a> is not redirecting to <a href="http://doc.tiki.org/Server+Check">http://doc.tiki.org/Server+Check</a> even though there is a page alias Same for <a href="http://doc.tiki.org/Menus">http://doc.tiki.org/Menus</a> which should go do <a href="http://doc.tiki.org/Menu">http://doc.tiki.org/Menu</a> ( <i>jb</i> )		Ok, it's a bug that happens when an alias leads to two pages. Tiki ideally should offer a link to both, like it does when you try to edit such a page
16 Dec 2012	arild	Tracker modified watching doesn't work. Added a TrackerList plugin, with a watch button. Activating watch and adding a new tracker item, does not send an email		<i>Clarification is required (4/02/13)</i>
11 Feb 13	Bsfez	Some help text are displayed in the wrong language on demo10x 	Tiki10	
11 Feb 13	Bsfez	Side by side translation is broken on T9 and T10 if wysiwyg is selected. The HARD thing (beside forbidding non-hitech use) is that switching to wiki won't help as you won't be able to save (all buttons gone). 	Tiki9 & 10	
19 Feb 13	Bsfez	Colorbox plugin is broken. Title, Filename ( i guess description too) are not displayed <a href="http://show.tiki.org/10x/colorbox+test">http://show.tiki.org/10x/colorbox+test</a>	Tiki9 & Tiki 10	

Date or revision number	Reported by	Description	Regression from version number	Status
19 Feb 13	Bsfez	In tracker, switching text area field from wysiwyg to non-wysiwyg corrupt all the fields in all the items. Not sure it can be solved quickly, but we should definitely add a big warning !	Tiki 10	
19 Feb 13	Bsfez	In <a href="http://show.tiki.org/10x/tracker3">http://show.tiki.org/10x/tracker3</a> (now totally corrupted) i tested wysiwyg in tracker text area fields. It was working just fine when i tested on the 31/01/13. I came across today and space were displayed on all the items "&nbsp;" Can't find a commit about it but may be someone has an idea about the change ?	Tiki10	
19 Feb 13	Bsfez	In tracker when using wysiwyg for text area and tracker field "dynamic_list" changing page/item display a warning "Are you sure you want to navigate away from this page ?" even if nothing was edited/changed (even if i don't click the edit tab) - Note : If the preference (tiki_preferences) "feature_wiki_save_draft". When feature is "n" i have less warning	Tiki10	
19 Feb 13	Bsfez	In tracker when using wysiwyg for text area the value weight and height (could be others) are not applied	Tiki10	
20 Feb 13	marclaporte	<a href="#">same row issue</a>	Tiki9	
31 Jan 13	marclaporte	<a href="#">maketoc_encoding</a>		
6 Mars 13	Bsfez	Cascading dynamic list field in tracker is broken again. It is not anymore possible to select a value from a dynamic list field to display the value of a second dynamic list. Only the first one is displayed properly, the second dropdown is empty. It has been fixed in Tiki6	Tiki9 & 10	
14 March 13	Geoff (eromneg)	Files field in trackers does not reliably allow a file (PDF tested) to be uploaded using either the simple 'browse' method or the 'drag and drop' method. Upload starts and then hangs at about 90%	broken in Tiki 10.1 might be earlier	

## Not possible to import an exported tracker

Go to Trackers / Import from CSV

Paste the following

### CSV raw data

```
itemId,status,created,lastModif,"the header field -- 1","the text field -- 2","numeric field -
- 3","the text area field -- 4","static text -- 5",
1,o,1351363726,1351363726,"","the text","123","The text area","",
2,o,1351363774,1351363774,"","123","1.0","sasa","",
3,o,1351453577,1351453577,"","121212","212121","fhdsakjfashlkhfsda",
```

results in - Error: Invalid data provided

Note: I am importing the tracker back into the same Tiki installation as exported the tracker/CSV file. "Preserve tracker ID" is not checked.

Arild

- Think you're in the wrong place there - that's for the tracker structure which is not CSV data. Looks like someone's changed the label, will fix. Import of data happens from the main tracker list and looks like this: 🗑️ (jb)

Yes, you are right. I was in the wrong place. The new title for the import is much better.

However, ..

Exported trunk tracker

#### Tracker import

```
itemId,status,created,lastModif,"Time -- 1","Messages -- 2",  
1,o,1355777366,1355777366,"1355777280","fra tiki trunk",
```

Imported in Tiki 10

Reports

"

2038-01-19 04:14 fra tiki trunk

"

The time is wrong.
