

Tiki Version control history

2002

Tiki was first released in October 2002 using [CVS](#) on [SourceForge](#)

The path to the source code was: <http://tikiwiki.cvs.sourceforge.net/tikiwiki/tiki/>

2008

The Tiki project transitioned to [Subversion \(SVN\)](#) as of [Tiki2](#), remaining at SourceForge. The platform was called [Alexandria](#) (internal name, not really promoted)

The path to the source code was <https://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki/> (now inactive)

The [Tiki Remote Instance Manager](#) (TRIM) project was started, and it offered a tool to convert a CVS instance to SVN.

2013

Still at SourceForge, the source code moved to the Allura platform

And later became [Apache Allura](#)

(from previous "Alexandria" platform). Ref.: [Update from SVN pre 2013](#)

The path to the source code became: <https://sourceforge.net/p/tikiwiki/code/HEAD/tree/>

2018

In May 2018, during the [Tiki19](#) development cycle, a [Git and SVN combined workflow](#) using ([SubGit](#)) was implemented. The canonical source code is still SVN on SourceForge, but contributors progressively start collaborating via Git, on [GitLab](#)

The path to the source code became: <https://gitlab.com/tikiwiki/tiki>

After a while (not sure when), it was agreed no one should commit on SVN anymore, because 2-way sync would sometimes break.

In November 2018, [Tiki Manager](#) started as a [revamp/fork/major upgrade of TRIM](#). Tiki Manager supports SVN and Git.

2019

Git becomes the default in [Tiki Manager](#): https://gitlab.com/tikiwiki/tiki-manager/-/merge_requests/91

2023

Shortly after January 2023, the [Git and SVN combined workflow](#) will be retired, and there will no longer be any updates to SVN (except perhaps to add warnings to migrate). <https://gitlab.com/tikiwiki/tiki> is the canonical repo.
