## To do on this page

1. Modify Blockers reports so it shows only blockers and 12.x (regression).

## Postponed modifications (previous input from Marc)

- Regression 12x (categories 283 + 172)
- Other bugs 12x (categories 283 + 187 or 174 or 192 or 56 or 57 but not 172 or 265)

1. Explain for each what category you need to put it in to appear on the list
2. Get rid of the "11.x Regression" category, which is confusing
3. Change the name of the page from Regressions+in+11x to 11x triage (or something)

## Related

- [Regressions in 11x](#)
- [Tiki12](#)

## Blockers

- Perhaps the Composer issues mentioned by Bernard in live.tiki.org on 2013-11-20 (where is ticket?)

## Potential data loss

- [Tracker history tracking issues was: Trackers inline editing: data is not added to tracker history](#)

# Decision needed

- [pattern for php console.php](#)
- Recent changes to the DB error page, which takes you to the installer
  - This is problematic because we no longer get useful error messages (such as MySQL went away)
  - Have been looking at this (for a while) and the only way i can see of even starting to fix this is to effectively roll back [r48266](#), and even then the detailed error messages don't appear (for security reasons afaict), so will leave this alone now...

## Todo for 12.0

- Remove all functions that are marked as deprecated in PHP 5.3 and 5.4
- [URL Rewriting Revamp](#): adding to Tiki log or error log so we catch them all through usage
- Improve [Composer](#)
- New install step: "setup your environment" for Wysiwyg (proposed by arild)

- This developed into the [Admin Wizard](#).
  - Yet to be confirmed for release. In reliability test. Confirmed, stable.
  - Page content still under review. Reviewed (and updated) by a bunch of people.

- A [User Wizard](#) has also been created.
  - ~~Yet to be confirmed for release.~~ No objections, as is, for 12.0.
  - ~~Review page content.~~ First stage done. Further review by others may be welcome.
  - ~~Find other trigger points, for 12.1+~~
    - Default installation homepage
    - Entry in Main App. Menu added (just above MyTiki). Out of MyTiki since MyTiki is disabled by default in new installs.
- [Inline Editing](#)
  - Menu update
  - Page "edit locking"
  - Problems with pages in wiki format
- ~~Create/Update Featured Profiles for Tiki12~~

## Todo for 12.1+

- ~~Add some other trigger points for the [User Wizard](#)~~
  - ~~Menu entry under MyTiki? (but what to do when MyTiki section is not enabled (default pref?))~~  
Undone, but link in the homepage, and at end of the Admin wizard. (Xavi)
- ~~Add a few screens of the Dev:Profiles Wizard (Featured, Useful, Demo), from the initial Tiki Setup Screen.~~
- ~~Backport menu icons from trunk (Xavi)~~
- Maybe backport [jQuery Spreadsheet 3.0 or 3.1](#) once it's proven to be stable in trunk?
