Other fixes

- Search the database for `TIMESTAMP` fields with default value `0000-00-00 00:00:00` as these break with mysql 5.7+

Discussions

- [Composer Dependencies Revamp](#) done for [Tiki17](#)
- [Datavis Convergence](#) proposal is in discussion for [Tiki17](#) No other work is planned for Tiki17. A lot has been done, and some things are clearer and some things still unclear.

Experimental / Unavailable / Duplicate check

Experimental and Unavailable are by nature temporary status. Or an option/preference/feature is underwork, under evaluation or about to be discarded or it is complete and good to be flagged as Basic or Advanced preference.

A review is needed to check and the Experimental / Unavailable and what should be done;

- Changing the flag to Basic or Advanced
- Remove it (or prepare the removal for the next version)

- Keep it as it is with verification to the team working on it they are still willing to complete it
