

# WYSIWYG Wiki

This project is to adapt the [WYSIWYG](#) editor to generate Tiki syntax instead of HTML

Inspired by: <http://mediawiki.fckeditor.net/>

Work is ongoing in the CoE branch

## Ideas/todos/questions

- Make plugins work in WYSIWYG
- Upgrade to CKeditor v3
  
- [fckgLite](#) is a WYSIWYG editor for DokuWiki. It uses the FCKeditor and converts the editor's HTML to DokuWiki markup using Javascript. It supports the complete DokuWiki syntax except for email-style quoting and embedded php and html
