

# Share

This page is to discuss, improve, and likely streamline (merge?) all share ("push"-type) functionality in Tiki. [Watch](#) this is a pull mechanism and will likely stay independent.

Related: [Token Access](#)

## Current Tiki features

- "Promote" was added to Tiki6 (Renamed to share as requested in r28263)
  - <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=28156>
  - <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=27056>
- [PluginSharethis](#) has a bug, do not use
- [Tell a friend](#)
- [alert](#)

## Questions

- Is there anything in [Zend Framework](#) to help with this?

Most services offer a http-based api either useable with javascript (no need for frameworks) or php, where we can use the http classes

## Feature requests

- URL shortener (Implemented in r28263)
- Useful because
  - could be using [page alias](#)
    - append in [Wiki Handler](#) could perhaps be useful

- <http://sharethis.com/> - Has a bug, do not use

# Why a new "Share" feature

- Every user can authorize the site with oauth for twitter/facebook so they need not to log in to each of the sites to push a message out on these channels.
- Instead of having a man in the middle doing the service for us (and the statistics/tracking), we can do it here
