

Webmail

related: [Inter-User Messages](#), [Newsletter](#), [Groupmail](#) and [ShowMail](#)

Status

Webmail has been revamped by Jonny Bradley in [Tiki3](#) and [Tiki4](#) to introduce [Groupmail](#), and later massively improved by Victor in [Tiki20](#) and [Tiki21](#). See [Cypht integration](#) and [Email as a first-class citizen](#)

Other

This list needs to be updated now that we have migrated to Cypht UI

- "Send" button needed below compose message
- After send message, go to inbox
- http and www links clickable in received emails
- not eat links in `<http://ma..>`;
- <https://github.com/marijnh/CodeMirror/issues/887>

Missing

- [Folders](#)
- Search
- [Conversation threading](#)
- Sent box
- Set "from" & "reply-to" (now, it's general "Sender email")
- Using [User Tracker](#) instead/in addition to contacts in address book

Issues

- when replying to an inbound mail or sending a new mail it is sent from the user's system email address - and not from the webmail account email address - which is not logical

Questions

- How are we doing on attachments?

Long term

- [tags](#) and [categories](#) on threads/messages
