

Search engine optimization

N.B. This page appears to be **mostly** about SEFURLs (although that is SEO related) rather than *search engine optimization*. Another page here [Search Engine Friendly URLs](#) has the start of how SEFURLs are currently working in Tiki.

Wishlist

- [Machine Learning for SEO and SEM](#)
- [Sitemap](#)
- [SEO Panel](#)

Top dogfood priorities

- [domain redirect from *.tikiwiki.org to *.tiki.org is not working](#) fixed
- [tiki-all_languages.php needs canonical](#)
- [Areas Perspective Multi-domain dogfood](#)
 - Areas: <http://suite.tiki.org/Tiki+vs+eyeOS> should not have `<link rel="canonical" href="https://suite.tiki.org/Tiki+vs+eyeOS">`. It should redirect or at least put a canonical to the domain with *suite* in it.

Top priorities

- Implement for mobile versions:
<http://searchengineland.com/switchboard-tags-like-canonical-tags-but-for-mobile-seo-127676>
- Canonical links: They should be done for various object types and have Short URLs. Please see: <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki/trunk/templates/canonical.tpl>
 1. ~~wiki~~ done
 - Comments (found in Google results) such as <http://dev.tiki.org/tiki-comment-list?type=wiki+page&objectId=Composer> and <http://dev.tiki.org/tiki-comment-list?type=wiki+page&objectId=TrackerToGanttChart> should 301 to the page
 2. ~~articles~~ done
 3. ~~blogs (needs SEFURL too)~~ done
 4. ~~blog posts (missing SEFURL)~~ done
 5. ~~forum~~ done
 6. ~~forum posts (missing SEFURL)~~ done (called it forumthread)
 - Super. Can we have title of threads like we do for blog bosts?
<http://tiki.org/forumthread45664-http-500-internal-server-error>
 - This [example found in Google search results](#) doesn't have a canonical
 - http://tiki.org/tiki-view_forum_thread.php?display=&comments_parentId=50955&forumId=26&fullscreen=&PHPSESSID= also found in Google, doesn't have a canonical
 - "https://tiki.org/tiki-view_forum_thread.php?comments_parentId=52156&display=print" was found in a search result. Perfect candidate for a canonical URL
 7. [Tracker items: nice URLs and Canonical](#)
 8. calendar - too tricky, the sefurl is messy and has too many rewrite rules, needs tidying up

- 9. categories done, but some tidying up of sort order etc needed
- Canonical should link to http version because better for SEO Done r40833
- tags for pages such as:
http://doc.tiki.org/tiki-browse_freetags.php?tag=+cms&sort_mode=name_asc&broaden=y
- directory: http://tiki.org/tiki-directory_browse.php?parent=36 vs <http://tiki.org/directory36?print=y>

Notes

- Inform robots not to index error messages (ex.: db connection issue)
 - but added meta generator?
 - Error 503 or something
 - <http://doc.tiki.org/Meta+Tags>
 - <http://antezeta.com/news/avoid-search-engine-indexing>
- inform robots not to index machine translated pages like:
http://info.tiki.org/tiki-index.php?machine_translate_to_lang=fa&no_bl=y&page=About+Tiki
- <http://www.google.com/support/webmasters/bin/answer.py?answer=35769>
- pages which end with .txt should also work with shortURLS
- browser title of https://info.tiki.org/tiki-list_file_gallery.php?view=list&galleryId=4 is "calendar"

Questions

- Should we use absolute URLs for canonicals?
 - Answer: yes
- What about: <https://github.com/piwik/piwik/issues/2974>

Discussion on IRC about SEFURLs

[+]

Some tips from Dima

Dima is a developer in contact with Regis & Marc and who will join the Tiki community in February 2013

```
> Also I'm sending you some seo-recomendations:
> 1 ) It would be better to make redirects (for example from
> http://info.tiki.org/Join+the+Community to
> http://info.tiki.org/Join+the+Community/) All urls should be in one format.
> 2) In robots.txt directive Crawl-Delay should be at the bottom of the file
> 3) Indexing search should be forbidden by placing Disallow:
> /tiki-searchresults* into robots.txt
> 4) <h1> tags should be without any attributes, such as id, class etc.
> 5) As I can see, main page is http://tiki.org/tiki-index.php but
> http://tiki.org/ redirects to http://info.tiki.org. It's not good :)
> 6) Also I've never seen directive Exclude in robots.txt before.
>
```

Huh ? I do not understand this:

Dima wrote:

4) tags should be without any attributes, such as id, class etc.

- why ? — luci

Tricky

- <http://doc.tiki.org/Wiki-Syntax+Text> -> OK
- <http://doc.tiki.org/wiki-Syntax+Text> -> not OK because of this rule RewriteRule ^wiki-(A-Za-z0-9+) tiki-index.php?page=\$1 QSA,L, but complicated what to do with this rule, backward compatibility suggest we keep it. But it's a rule that don't even support non-alpha in pagename
