

tiki13Development

This page contains the information that was originally on the [Tiki13](#) page but that page is now focused on the release

Video introduction

Introduction by Nelson Ko during the [TikiFestBootstrap](#) (2013) to the features planned to be introduced in Tiki13.

Bootstrap and dependencies

- [Bootstrap 3](#)
 - [File and directory structure revamp](#)
 - [Menu Revamp](#)
 - Future method to distribute themes (ex.: profiles or Github or ...)

Essential

- [Update notifier](#)

After Bootstrap is well underway

If Bootstrap takes all our energy, some of these will be pushed to [Tiki14](#)

- jQuery 2.0 (and drop support for IE7 and IE8)
 - [Windows XP SP3 will go out of support on April 8, 2014](#) (IE9 can't be installed on XP)
 - <http://googleappupdates.blogspot.co.uk/2012/09/supporting-modern-browsers-internet.html>

Goals, Recognitions & Rewards

see [Goals - Recognitions - Rewards](#)

Must Reads feature

See [Must Reads Feature](#)

While doing [Goals - Recognitions - Rewards](#) it was discovered that this use case is a separate feature rather than part of the [Goals - Recognitions - Rewards](#) feature. So it is being treated as a separate feature.

Notifications Revamp

see [Notifications Revamp](#)

Mail Revamp

see [Mail Revamp](#). This will be planned for in the Tiki 13 timeframe but will be executed in full in the Tiki 14 timeframe. Note that some parts will be done as part of Notifications Revamp.

If there is a benefit as part of the other improvements

- Zend Framework 2.x
 - We'll likely need a replacement for Zend_Mail
- Smarty 3.2?

Potential new default settings for Tiki13

See [New Defaults](#)

Potential new profiles in the Profiles Wizard

See [Profiles Wizard](#)

Upgrade Wizard

See [Upgrade Wizard](#)
