

Connect

Connect arrived as a new admin panel (tiki-admin.php?page=connect) in [Tiki4](#) and is being extended and improved in [Tiki8](#)

The goal is to help connect Tiki community members

Panel/dashboard contents:

Read about Tiki project

- news RSS feed
- latest commits
- latest chat messages

Become a member of tiki.org

- <http://tiki.org/tiki-register.php>

Register site

Share some info about your community. This info is sent to mother.tiki.org and can optionally be related to voting and usage statistics described below.

- Keywords
- Geolocation or a zone covered (where you can draw a zone on a map)
- Languages
- Site Title
- url(s)
- Admin's tiki.org username or email (for updates)

Once registered you can see a list of Tiki sites that are nearby, share my keywords and/or languages

Feedback about preferences

Three simple voting buttons for each pref

- Like (*general adoration*)
- Fix (*interesting but broken*)
- WTF (*What's this feature?*)

This will be sent back to mother.tiki.org for statistical purposes, which will serve

- as the basis to generate [Custom admin panels](#)
- to dynamically update the [ratings about features](#)

Usage statistics collection

As well as the above there will be the option (by default?) to send anonymous usage statistics to mother.tiki.org. This will record over time how your site is using:

- Preferences
- Modules
- Plugins
- Simple object counts (pages, blog posts, forum posts, comments etc)

This can then be combined with statistics from [SVN](#) and the votes as described above to map out which features are being used and enjoyed, which ones need attention and which ones can be removed or tidied up.

Other ways to help

Subscribe

- security mailing list
- devel

Connect to the Tiki community

- via Facebook, Twitter, indenti.ca etc.
- IRC chat room (popup or iframe within Tiki)
- live.tiki.org with [BigBlueButton](#)

Help Tiki

- RSS feed about ways to help (vote for Tiki, etc.)
 - [Generate valid RSS feeds from wiki pages, useful for ad serving and remote management of content, like a site footer](#)
- Powered by
- Banner ads
- Affiliates

Perhaps this should merge with [Viral Tiki](#)?

To do

- [Connect & Redactor](#): use a pref attribute instead of maintaining lists of prefs
