Description

The Site menu bar in Site Identity can be turned on (checkbox), but there's no textarea to input the code to be used for the menu bar. (Nothing is displayed at two of my 1.9.7 sites, anyway.)

When set, the template should use `{eval var=$sitenav_code}` and I guess this should be stored in the `tiki_preferences` table. But there's no way to input it. Seems like `tiki-admin.php?page=siteid` needs a textarea similar to the one for custom code content for Site nav code (PHP Layers menu tag, etc.)
