Description
TikiWiki is causing Apache to crash with the following error in the Apache logs:

Thu Feb 22 23:26:56 2007 notice Apache/2.2.3 (Win32) mod_ssl/2.2.3 OpenSSL/0.9.8d PHP/5.2.0
mod_perl/2.0.3-dev Perl/v5.8.8 configured — resuming normal operations
Thu Feb 22 23:26:56 2007 notice Parent: Created child process 2668
Thu Feb 22 23:26:58 2007 notice ModSecurity for Apache 2.0.4 configured
Thu Feb 22 23:27:00 2007 notice Child 2668: Child process is running
Thu Feb 22 23:27:00 2007 notice Child 2668: Acquired the start mutex.
Thu Feb 22 23:27:00 2007 notice Child 2668: Starting thread to listen on port 443.
Thu Feb 22 23:27:00 2007 notice Child 2668: Starting thread to listen on port 80.

And this is the Windows Event viewer:

Faulting application httpd.exe, version 2.2.3.0, faulting module ntdll.dll, version 5.1.2600.2180, fault
address 0x000106c3.

This is running on a brand new installation of Windows XP Pro with the latest Web-Developer Server
Suite WAMP distribution giving Apache 2.2.3, PHP 5.2.0/4.4.4 and MySQL 5.0.27. I have also tried it
with the latest version of Apache and PHP and get exactly the same error!

Cheers Mike
Solution

Tiki can't cause an Apache crash. An Apache crash would probably be caused by an Apache bug.
Upgrade your system and report a bug to Apache or your OS vendor if this persists.
