Description

Hi,

After translation of language.php, it does not seems reflect the translation work.

When I reload a related page, sometimes reflect and sometimes does not reflect.

I am not sure but I guess tikiwiki has some cache page.

If so, how to clear the cache?

Or more straight, how to reflect language.php immediately?

Please give me a hint.

Thanks,

Shigerusz3

Solution

ML: solution: goto: tiki-admin_system.php and delete the cache

As mentioned after changing language (or CSS) to refresh the cache you need to refresh Tiki cache through the admin interface or using the console:

```
php console.php c:c
```
