Description
I had two usergroups, then added a third, then went in to remove a user from a group from the Admin Users page. If I go into Admin Groups and click on a group and then go down to Show Users in Group, it shows the correct list with the appropriate users missing from the group that I had removed.

If I go into Admin Users, the list of users shows up and if I look at the line entry for the users I removed from ABC group, the group shows up in italics (*ABC*).

Unless there is a cleanup function I'm unaware of, I think this may be a bug. I'm running 1.9.7 according to the README.

Solution
Can no longer recreate error. Presumed fixed.
