Description

Related to this other bug report.

When adding a new calendar like "Comisión Web" (without double quotes), categorized to 1 category called "Comisión Web" (child of Category "Comisiones"), and setting all the other settings as default values, I got these messages on top of the page:

Notice: Undefined offset: 86 in /home/httpd/tiki19/categorize_list.php on line 42

Notice: Undefined index: categId in /home/httpd/tiki19/categorize_list.php on line 48

Notice: Undefined offset: 87 in /home/httpd/tiki19/tiki-admin_calendars.php on line 67
Calendar seems to have been created.

--

Update: confirmed using tikineat.css and tpl's

Update July 26th 2007:
Admin calendar produces to me:

Warning: in_array() [function.in-array]: Wrong datatype for second argument in /home/httpd/tiki19/tiki-admin_calendars.php on line 67

(... repeated like 50 times or so)

But not categorize list any more...

Solution
fixed
