**Description**

**Related to** this other bug report.

When adding a new calendar like "ComisiÃ³n Web" (without double quotes), categorized to 1 categorie called "ComisiÃ³n Web" (child of Category "Comisiones"), and seeting all the other settings as n (default values), I got these messages on top of the page:

- Notice: Undefined offset: 86 in /home/httpd/tiki19/categorize_list.php on line 42
- Notice: Undefined index: categId in /home/httpd/tiki19/categorize_list.php on line 48
- Notice: Undefined offset: 87 in /home/httpd/tiki19/tiki-admin_calendars.php on line 67
Calendar seems to have been created.

--
Update: confirmed using tikineat.css and tpl's

Update July 26th 2007:
Admin calendar produces to me:

```
Warning: in_array() [function.in-array]: Wrong datatype for second argument in /home/httpd/tiki19/tiki-admin_calendars.php on line 67
Warning: in_array() [function.in-array]: Wrong datatype for second argument in /home/httpd/tiki19/tiki-admin_calendars.php on line 67
(... repeated like 50 times or so)
```

But not categorize list any more...

Solution
fixed
