Description

If using tabs, after creating a tracker, the user should be directed to the form of listing trackers ("Trackers" tab), and not remaining at the "Create trackers" tab, as it does right now, since the normal procedure after creating a tracker is either granting it with local perms of just creating fields for that tracker (so that you need to see the "action columnn" in the table at "Trackers" tab.

As per Tiki23 you create a tracker in a modal therefor I think this ticket is outdated.

Please retest with recent version of Tiki and if you still have an issue re-open this ticket filling all the fields with updated information.
