### Description

We had just reconfigured the disk to RAID1 and backed up mysql, tiki, and php on our linux box.

Now, we are getting "Page cannot be displayed" after we edit the homepage and try to save it. It is happening on tiki-editpage.php but it is there. The permissions are 644 apache.

The second thing seen is the forums messages can't be accessed anymore.

Does anybody have experience with these problems? Any suggestions? Perhaps we should re-install all the software.
