Description

Mod extcalculator (extcalc) doesn't work properly: apparently nothing happened after clicking on the calc buttons, but the real problem was that the mod didn't show completely under many theme styles (last column of buttons on the right was hidden by dentral column in Tiki.

See <http://doc.tikiwiki.org/tiki-index.php?page=Mod+extcalculator>

There is an issue with the module not showing in full width in the left column.
And the color under any style is too weak (greyish/whiteish...)
